

Amendments to the Harmonized System Explanatory Notes – HS Committee 63rd Session

The following list contains the decisions taken by the Harmonized System Committee (**63rd Session – March 2019**) concerning amendments to the Harmonized System Explanatory Notes, applicable as of 1 June 2019. This publication will be updated regularly.

The Harmonized System Explanatory Notes are published by WCO in 5 volumes (**2017 edition**) and reflect the official interpretation of the Harmonized Commodity Description and Coding System. They also contain the text of the Subheading Explanatory Notes indicating the scope and content of certain of the Harmonized System Subheadings. The Explanatory Notes are available in English and French, the two official languages of the WCO, and can be ordered directly (see “Bookshop” on this Web site). They are also available on-line.

The amendments listed below are reproduced in the order of the current pages concerned and will be incorporated into the aforementioned WCO publications in due time by replacing the pages affected by the amendments made.

AMENDMENTS TO THE EXPLANATORY NOTES
TO BE MADE BY CORRIGENDUM

CHAPTER 3.

General. Page I-3-2. First paragraph.

Delete and substitute:

“On the other hand, fish and crustaceans, molluscs and other aquatic invertebrates are classified in **Chapter 16** if they have been cooked or otherwise prepared or preserved by processes not provided for in this Chapter (e.g., fish fillets merely covered with batter or bread crumbs, cooked fish). It should, however, be noted that smoked fish and smoked crustaceans, molluscs and other aquatic invertebrates, which may have undergone cooking during or before the smoking process, and crustaceans in their shells simply steamed or boiled in water, remain classified in **headings 03.05, 03.06, 03.07 and 03.08**, respectively. Molluscs that have been subjected only to scalding or other types of heat shock (which do not entail cooking as such), necessary to open the shell or stabilize the mollusc prior to transportation or freezing, also remain in this Chapter. Flours, meals and pellets obtained from cooked fish and cooked crustaceans, molluscs or other aquatic invertebrates remain classified in **headings 03.05, 03.06, 03.07 and 03.08**, respectively.”.

(Doc. NC2626E1b/O/11)

Heading 03.07. Page I-0307-2. New second paragraph.

Insert the following new second paragraph:

“This heading also covers molluscs that have been subjected only to scalding or other types of heat shock (which do not entail cooking as such), necessary to open the shell or stabilize the mollusc prior to transportation or freezing.”.

Heading 03.07 Page I-0307-2. Exclusion paragraph.

Replace the expression “molluscs boiled in water” with the expression “molluscs cooked in boiling water.”

Insert new last paragraph:

“However, this heading **excludes** crustaceans, in shell, which have been cooked by steaming or by boiling in water (whether or not with small quantities of provisional chemical preserving agents) (**heading 03.06**) and molluscs that have been subjected only to scalding or other types of heat shock (which do not entail cooking as such), necessary to open the shell or stabilize the mollusc prior to transportation or freezing (**heading 03.07**).”.

(Doc. NC2626E1b/O/11)

CHAPTER 26.

Heading 26.21. Page V-2621-1. New exclusion.

Insert the following new exclusion after Item (5).

“The heading **excludes** separate chemically defined silica fume collected as a by-product from silicon, ferrosilicon and zirconia production, generally used as a pozzolanic additive in concrete, fibre cement, or refractory castables, and as an additive in polymers (**heading 28.11**).”.

(Doc. NC2626E1b/O/16)

CHAPTER 28.

Heading 28.11. Page VI-2811-5. Part (M). Third paragraph.

1. First sentence.

CHAPTER 37.

GENERAL

Page VI-37-1. First paragraph.

Delete and substitute:

“The photographic plates, film, paper, paperboard and textiles of Chapter 37 are those with one or more layers of any emulsion sensitive to light or other forms of radiation having sufficient energy to cause the necessary reaction in photon (or photo) sensitive materials, i.e., radiation of wavelength no longer than approximately 1,300 nanometers in the electromagnetic spectrum (including gamma-rays, X-rays, ultra-violet and near-infrared radiation), as well as particle (or nuclear) radiation, whether for reproduction in monochrome or colour. Certain plates are, however, not coated with an emulsion but consist wholly or essentially of photosensitive plastics which may be affixed to a support. Infrared laser sensitive plates are often called thermosensitive/thermal plates or heat sensitive plates.”.

(Doc. NC2626E1b/O/10)

Heading 37.01.

Page VI-3701-1. (A) **Photographic plates and film in the flat, of any material other than paper, paperboard or textiles.** First paragraph.

Delete and substitute:

“Such plates and film **in the flat** (i.e., not in rolls), including film put up in disc form, are **unexposed** and are generally coated with a **sensitising** photographic emulsion. These may be made of any material **except** paper (e.g., paper “plates” used to produce negatives), paperboard or textiles (**heading 37.03**). The materials commonly used are glass and cellulose acetate, poly(ethylene terephthalate) or other plastics (for film packs or cut films), and metal or stone (for photomechanical processes). Certain plates, which when exposed and processed will be used for printing, are not coated with an emulsion but consist wholly or essentially of photosensitive plastics. They may be affixed to a support of metal or other material. Some of these plates must have their degree of sensitivity enhanced prior to exposure and other plates must have the degree of hardening of the irradiated sections (thermally) enhanced after irradiation.”

CHAPTER 38.

Heading 38.24. Page VI-3824-5. Item (25).

Delete and substitute:

“**(25) Preparations for the manufacture of certain ceramic articles** (artificial teeth, etc.), e.g., mixtures with a basis of kaolin, quartz and feldspar.

This category also includes dental zirconia products with a basis of zirconium oxide (ZrO₂) and other metal oxides. They can not be applied in dentistry prior to undergoing several procedures such as milling, sintering and glazing to take their final forms of artificial teeth or dental restorations. ”.
