

Quality description: Monthly survey on foreign trade of goods 2007-2010

1. Relevance of statistics

1.1 Content and use of statistics

The monthly survey on foreign trade of goods contains the monthly data on the foreign trade of Finland. It presents the development of the export, import, and balance of trade of Finland according to various commodity classifications, branches of industry of the trading companies as well as different countries and groups thereof.

For the purposes of the economic analysis, the monthly survey gives a reliable picture of the newest development of the foreign trade. It constitutes an important instrument for the decision makers as well as planners and researchers in the public and private sectors, both at the national level and within the operations of the EU and several international organizations.

1.2 Central concepts and classifications

Information on the internal trade i.e. the trade between the EU Member States is collected through the Intrastat system from the operators who are obliged to provide information. The statistics on the external trade i.e. the trade with countries not in the EU are obtained from the customs clearance system.

The compilation of statistics on commodities is based on the Combined Nomenclature CN of the EU. The export statistics are gathered as per the countries of destination according to the FOB ("free on board") value and the import statistics as per the countries of origin according to the CIF ("cost, insurance, and freight") value. The country of origin is the country in which the goods were produced or in which the latest economically important stage of production took place. The packaging of the commodities is not regarded as production. As for export, the country of destination is the last country known at the time of the export of the commodities from Finland, either direct or via another country.

In the monthly survey, the CN-based statistical material has been combined according to the following classifications:

- Standard International Trade Classification (SITC, Rev.4, ex 2007)
- Classification of Products by Activities (CPA)
- Main Industrial Groupings (MIG) (according to main use of goods) This product classification is not official.
- Nomenclature générale des Activités économiques dans les Communautés européennes (NACE 2002) (classification of the EC according to industries)

1.3 Acts and Decrees

Foreign trade statistics are based on the legislation of the European Community as well as the national Statistics Act (280/4) and Customs Act (1466/94). Within the EU legislation, the compilation of statistics is steered by the Basic Regulation on internal trade statistics (EC, 638/2004), Basic Regulation on external trade statistics (EC, 1172/95), and the respective implementation provisions.

2. Method description

The information on the trade carried on by Finland with the other EU Member States is collected from the compulsory statistical declarations provided monthly by importers and exporters through the Intrastat system of the internal trade. The information on the trade between Finland and Third Countries is obtained from customs declarations, which have to be submitted on every import and export consignment. The data on both internal and external trade are put together to form the statistics on the foreign trade of Finland.

The country classification is based on the Commission Regulation (EC, 1833/2006) on the country classification of the statistics on the Community external trade and the trade between the Member States. The country codes comply with those of the ISO/DIS 3166 standard of the International Organization for Standardization. The groups of countries are defined in the explanatory notes of the monthly publication.

3. Correctness and accuracy of information

The monthly statistics are preliminary and contain estimates. Thus the figures are changing along with the completion and elaboration of the basic material. The monthly figures are e.g. supplemented by estimations on missing statistics declarations and those on companies with figures remaining below the threshold values. Each EU Member State defines its threshold i.e. minimum value of inclusion in statistics for the calendar year, based on the annual value of importation and exportation by companies.

As a rule, all goods exported from and imported in Finland are recorded to statistics. The prerequisite for the inclusion in statistics is that the goods physically arrive in or depart from this country. By way of exception, water- and aircraft are recorded to statistics upon a change in the status of ownership. Among other things, neither transit transports nor economic measures of insignificant commercial value are included in the statistics. Also the smallest companies are released from the obligation to declare statistics on internal trade. Neither is foreign trade in services recorded to these statistics.

4. Up-to-dateness and timeliness of published data

The accurate publication dates of the monthly survey are announced for abt. one year at a time. The timetable of publication is maintained on the web site of the National Board of Customs. The statistics are published within nine weeks upon the expiry of the respective month.

The statistics get specified along with the production of the statistics on the following months. The statistics on each calendar year are confirmed by the end of April in the following year.

5. Availability and transparency / clarity of data

The monthly survey on foreign trade is published on the web site of the National Board of Customs on the dates announced in advance. The monthly survey can also be ordered to be transmitted by e-mail. Detailed statistics according to categories of commodities and countries are available from the Statistics Service and, free of charge, the statistical database Uljas of Customs at the time of the publication of the monthly survey.

Further information on the monthly survey and all the other statistics on foreign trade are available from the web site of Customs -> Foreign trade statistics. This site comprises e.g. the principles of compiling statistics on foreign trade as well as all the surveys on the foreign trade of Finland published by the National Board of Customs.

Further information is also available from the Statistics Service at:

- telephone: +358 9 6141 (exchange) or +358 20 690 603 (Statistics Service direct)
- e-mail: statistics[at]tulli.fi (replace [at] in the address with @)
- Internet: www.tulli.fi
- Statistical database Uljas: uljas.tulli.fi

6. Comparability of statistics

Monthly surveys on foreign trade are being produced since the 1960's. They are available from the web site of Customs since 2000. Only occasional paper versions of surveys older than that are available.

7. Clarity and consistency / coherence

The information contained in a monthly survey gets specified along with the publication of further monthly surveys.

Beside foreign trade statistics, statistical information on foreign trade is available from the National Accounts of the Statistics Finland and the Balance of Payments statistics of the Bank of Finland.

Statistics on the foreign trade of other countries are accessible at the reading room of the Statistics Service.

Statistical information on the foreign trade of the EU Member States is available from the publications, web site, and Easy Comext database of Eurostat. This database can be consulted free of charge through Internet. The statistics compiled by the UN on foreign trade (the Comtrade database) are available free of charge from the web site of the UN.

The dissimilarities of the concepts and definitions applied by the EU Member States and their most important trading partners as well as the UN Member States may affect the comparability of statistics.
